

Tracy Moriano

SOFTWARE ENGINEER

About me

I have developed my career by solving technological challenges focused on creating effective and functional digital experiences.

As a Full Stack Developer, I have designed and built robust, optimized, and user-centric digital solutions, integrating technology that enhances interaction and results. I lead the creation of digital platforms that help businesses stand out online, connect with their audience, and grow sustainably.

I transform ideas into great results for companies in different sectors.

Professional Experience

Full Stack Developer | Kasa Tech Solutions S.A.C.

- Design and development of web pages, mobile applications and intelligent chatbots, integrating frontend, backend and databases.
- Creating functional and responsive interfaces that improve the user experience on all devices.
- High-impact digital experience architecture that combines innovation, scalability, and cutting-edge technologies to create products that stand out, convert, and generate value.

Full Stack Developer | APM Inversiones E.I.R.L.

- Implementation of microservices with Django REST Framework and Docker.
- Configuration of environments with PostgreSQL and Redis.
- Secure and efficient API development and data management.
- Execution of unit tests and support for CI/CD automation.

Backend Developer | Perú Data Recovery S.A.C.

- Development and maintenance of server logic and web application functionalities.
- Database management and optimization to ensure accurate and secure data storage.
- Integration with user interfaces and APIs to ensure correct data display and consistent application performance.
- Error detection and correction to optimize performance.

Frontend Developer | Data Network Perú S.A.C.

- Developing responsive and engaging web interfaces using HTML, CSS, and JavaScript.
- Identifying and fixing bugs, optimizing performance, and continuously improving websites.
- Learning and applying modern frameworks while maintaining clear documentation.
- Working with APIs and backend systems to enable websites to display dynamic information.
